

The Specialist Power House of Inspirational, Educational and Sustainable technologies – established in 1946

Carbon Reduction – we don't just talk about it, we've done it

Ask us what it's like to install a solar photovoltaic system, biomass boiler linked with solar hot water, insulated render and natural ventilation. We are award winning carbon-cutters - we produce over 70% of our domestic electricity, and we've reduced our commercial carbon footprint by over 90%. We specialise in small scale bespoke and demonstration systems and design amazing micro-generation centrepieces for your head-office, school, technology centre or eco-garden.

Renewable Energy Education – Pre School to 80+ - One Stop Shop

With green engineering and academic backgrounds, we source, supply and advise on the perfect range of renewable energy science construction and energy kits and models for your education requirements (and enjoyment).

Employee Engagement - Motivate your Green Team

Our Power House Model with 20+ low carbon construction projects will inspire your management, staff or student group to embrace carbon-reduction technologies: it is just one of a range of 'boys' toys' or 'girls' gizmos' to entertain, educate and engage your employees - to switch them on while training them to 'switch off'. We also offer 'Save battery waste packs' for your school, office or workplace – cutting cost, CO2 and clutter (toxic landfill, doesn't do much for alliteration) helping you to meet your battery directive targets whilst educating staff, students, clients and customers.

Tomorrow's scientists, engineers & architects

Eco co-ordinators, science teachers, Gifted and Talented specialists and summer schools love our microgeneration science kits - cost effective, stress free, enjoyable resources demonstrating renewable energy, allowing hands on student learning – bringing engineering, science and sustainability to the heart of the eco-school community.

Changing Behaviour - 'green flavoured' corporate gifts

Although we are literally 'power mad' and hate wasted resources, we can be 'over powering' to proud polluters, gas-guzzling geezers or wasteful wastrels (not you of course, but we all know one who is....) so for them we have some light-hearted offerings for subliminal eco-conversion - go on, we dare you to ask
